8. Prototype Demo

Approach & Methodology

Evolutionary Prototype Model

Modules to be Developed

1. Front-desk
2. Housekeeping
3. Transport
4. Review

Time taken to complete each phase

Planning & Design + 21 days (15/10/18 - 13/11/18)

Development of Application + 58 days (13/11/18 - 1/2/19)

Total project time = 80 days

Constraints

- At least 2 hrs for discussion
- Little room for delays or changes
- Only 17 weeks to complete project

- Lack of suitable venues for meetings
- Hotel is a far distance from office

- School schedules may interfere with internship projects
- Members may have commitments outside of Patheon Systems

Resources & Budget

Software Requirement Specifications

Changes From Phase 1

- Review Module removed
- Report Module to be developed

1. FRONT DESK

System Functions: Front-Desk

1. Creating reservation for the guest
 2. Checking in a guest
 3. Checking out a guest
- 

2. TRANSPORT

By Nur Sabrina Bte Osman

System Functions: Transport

1. Create a Transport Booking
2. Update Transport Booking
3. View All Transport Bookings

3. HOUSEKEEPING

By Su Swe Zin Nyan

System Functions: Housekeeping

1. Update room cleanliness
 2. Update facilities status
 3. To update which staff is appointed to which room
 4. Notify staff of room that requires attention
- 

4. REPORT

By Gerald Soh WeiJie

System Functions: Reports

1. Generate Room Status Report
 2. Generate Guest Report
 3. Generate Overview Report
 4. Generate Room Occupancy Report
 5. Generate Housekeeping Report
 6. Generate Stock Report
 7. Generate Transport Report
- 

User Characteristics

1. Receptionist
 2. Housekeepers
 3. Management Staff
 4. System Administrator
- 

Authorization

	Receptionist	Management Staff	Administrators
View Dashboard	✓	✓	✓
Manage Bookings	✓	✓	✓
Manage Guests	✓	✓	✓
Manage Housekeeping schedule	×	✓	✓
Manage Transport bookings	✓	✓	✓
View Occupancy, Stock & Inventory, Housekeeping and Transport Reports	×	✓	✓
View Room Status , Guest, Overview Report	×	✓	✓

Reports

Software Requirement Specifications

- Functional Requirements
- Data Requirements

Software Design Specifications

- Architecture Design
- UI Design
- Program Design

Revised Constraints

Operating System

The users should be able to use the hotel system through operating systems from Windows 7 and newer.

Due Date

Project is to be due by 10 February 2019.

Budget

Budget for project is set at \$70,000

Data Expiry

Data held by the Hotel will expire in 5 years.

Software Test Specifications

Changes From Phase 2

- Developer responsible for Front Desk Module resigned
- Test specifications on Front desk module could not be created
- Facilities status is cancelled out because Mr. Wang says it can be used as duty type.

Module Development

Report Module

- Naming convention: camelCase

```
<div class="headerCenter">  
<div class="filterCenter">
```

- Code Layout: End-of-Line Style

```
constructor(private reportService: ReportService, private router: Router) {  
  this.reportService.getAllOccupancy().subscribe(O_Data => {  
    this.O_Data = O_Data;  
  });  
};
```

Report Module

○ Commenting

```
<!-- Header -->
<div class="container">
  <div class="row">
    <div class="headerCenter">
      <h1>
        Room Occupancy
      </h1>
    </div>
  </div>
<!-- End of Header-->

if (err) return console.log(err)
db = database.db('testone');
});
```

```
// -----REPORT-----
```

```
// Add new entry to Occupancy Report
```

```
router.get('/regdata/:month/:year/:standard/:deluxe/:twinBed/:family/:superior/:booked/:occupancy/:revenue', (req, res) => {
```

```
/* GET api listing. */
router.get('/', (req, res) => {
  res.send('api works');
});
```

Transport Module

Good Programming Style

- Comments
- Code Layout
- Naming Conventions

Transport Module

Comments

- Inline & Block Comments
- Uses for Comments
 - Description for Codes
 - Debugging

```
// get all transport bookings  
getAllTransport() {  
    return  
    this.http.get<any[]>('./api/transport');  
}
```

```
/* Get port from environment and store in Express. */  
const port = process.env.PORT || '3000';  
app.set('port', port);
```

Transport Module

Code Layout

- Braces Placement
 - End-of-Line
- Format Document Tool

```
ngOnInit() {  
  
  this.transportService.getAllTransport()  
    .subscribe(transport => {  
      this.transport = transport;  
    });  
}
```

Run Code	Alt+Ctrl+N
Go to Definition	F12
Peek Definition	Alt+F12
Go to Type Definition	
Find All References	Shift+F12
Rename Symbol	F2
Change All Occurrences	Ctrl+F2
Format Document	Alt+Shift+F
Refactor...	Ctrl+Shift+R
Source Action...	
Cut	Ctrl+X
Copy	Ctrl+C
Paste	Ctrl+V
Command Palette...	Ctrl+Shift+P

Transport Module

Name Conventions

- Lower Camel Case

```
// get all transport bookings  
getAllTransport() {  
    return this.http.get<any[]>('./api/transport');  
}
```

Housekeeping Module

- **lowerCamelCase**
- insertrequest
- insertRequest
- Understand codes faster and easier
- Lesser/no mistakes made
- Lesser/no errors made
- Simple and descriptive

```
getStaff(){  
    return this.http.get('/api/staff');  
}
```

Housekeeping Module

■ Comments

- Aid javascript
- Explain what is going on
- Help programmer remember
- Remove bits of code from execution
- Single -line comments
 - " //
- Multi - line comments
 - " */"

```
// Get dependencies
const express = require('express');
const path = require('path');
const http = require('http');
const bodyParser = require('body-parser');
```

```
/**
 * Web Animations `@angular/platform-browser/animations`
 * Only required if AnimationBuilder is used within the
 * application and using IE/Edge or Safari.
 * Standard animation support in Angular DOES NOT require any
 * polyfills (as of Angular 6.0).
 */
```

Housekeeping Module

- **Formatting**
 - Read code easier
 - Eliminates “diff noise”
 - More comfortable pairing
 - Sharing code bases
 - Standardize codes
 - Make it easier to read code with comfort
 - Lesser mistakes made

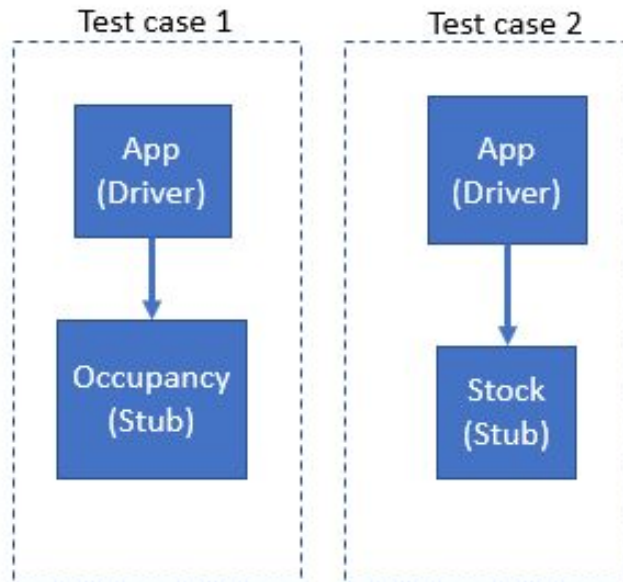

```
export class StaffPipe implements PipeTransform {  
  transform(staffs: any[], field: string, staff: string): any[]  
  {  
    if (!staffs && staffs.length) {  
      return [];  
    }  
  
    if (!field || !staff) {  
      return staffs;  
    }  
  
    return staffs.filter(singleItem =>  
      singleItem[field].includes(staff)  
    );  
  }  
}
```

Unit Testing

Report Module

- Unit testing

Report Module

- Integration testing

Report Module

- Normal, Abnormal and Illegal Data Types
- Input Field: Filter

Normal Data	Illegal and Abnormal Data

Transport Module

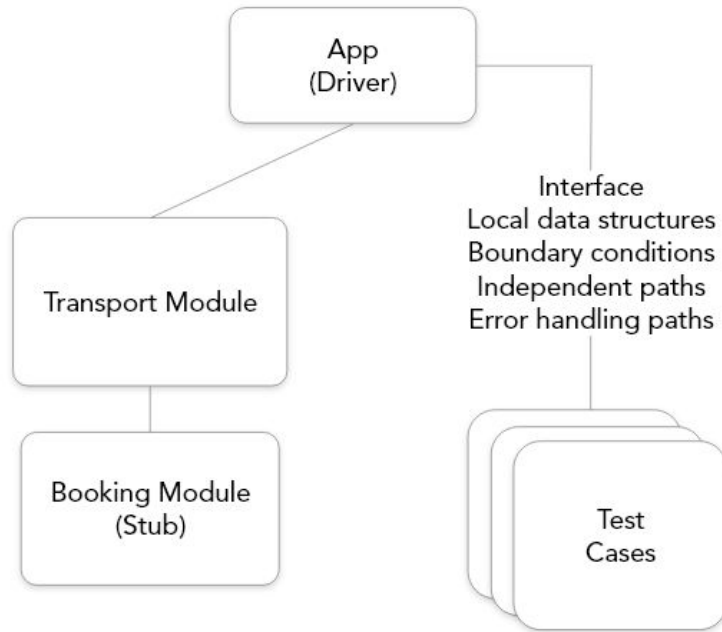

WHITE BOX TESTING APPROACH

White-Box Testing

- Used in Unit, Integration & System Testing
- Can be commenced at early stages of development
- Tested by Developer
- To test internal structure of system

Transport Module

Stubs & Drivers

- Tests to be done on incomplete or unavailable modules
- Temporary replacements to undeveloped modules

Transport Module

Transport

Illegal Data

123!!

Create New Booking

Reservation ID	Name	Time	Date	Location	Driver	License Plate	Status	
1	123	1	1	123	1	1	1	...

Transport

Normal Data

87293718

Create New Booking

Reservation ID	Name	Time	Date	Location	Driver	License Plate	Status	
87293718	John Doe	23:30	12/01/19	Changi Airport, Terminal 2	Tan Zhi Yuan	SKC1223B	Cancelled	...

Housekeeping Module

- Unit Testing
- First level of testing
- Ensures individual components are functional and work like designed to
- Makes debugging easier
- Unit Testing Method is performed by using White-Box Testing method
- Three unit testing task
 - Unit Test Plan
 - Unit Test Cases
 - Unit Test
- Tests are periodically ran
- The sooner the problems are shown, the better it is

Housekeeping Module

- Black-Box (Functionally) Testing

Housekeeping Module

- Attempts to find errors such as incorrect or missing functions
- Interface errors
- Errors in data structures
- Behaviour or performances errors
- **Equivalence Partitioning**

Integration with GitHub

The screenshot shows the GitHub 'Create a new repository' interface. At the top, the title 'Create a new repository' is followed by a subtitle: 'A repository contains all project files, including the revision history.' Below this, the 'Owner' is set to 'sabrinaosm' and the 'Repository name' is 'DelonixRegia', which is marked with a green checkmark. A suggestion for repository names is provided: 'Great repository names are short and memorable. Need inspiration? How about fictional-octo-palm-tree?'. There is an optional 'Description' text area. Under the 'Visibility' section, 'Public' is selected with the description 'Anyone can see this repository. You choose who can commit.', while 'Private' is unselected with the description 'You choose who can see and commit to this repository.' The 'Initialize this repository with a README' checkbox is checked, with a note: 'This will let you immediately clone the repository to your computer. Skip this step if you're importing an existing repository.' At the bottom, there are dropdowns for 'Add .gitignore: None' and 'Add a license: None', along with an information icon. A green 'Create repository' button is at the very bottom.

Create a new repository

A repository contains all project files, including the revision history.

Owner Repository name *

sabrinaosm / DelonixRegia ✓

Great repository names are short and memorable. Need inspiration? How about fictional-octo-palm-tree?

Description (optional)

☒ Public
Anyone can see this repository. You choose who can commit.

☐ Private
You choose who can see and commit to this repository.

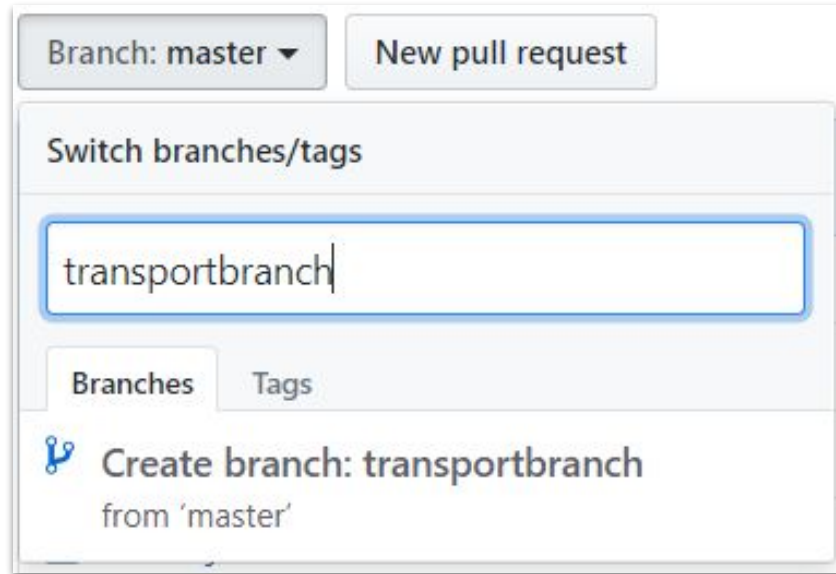

☒ Initialize this repository with a README
This will let you immediately clone the repository to your computer. Skip this step if you're importing an existing repository.

Add .gitignore: None Add a license: None ⓘ

Create repository

1) Creating a Repository in GitHub

Integration with GitHub

Branch: master ▼ New pull request

Switch branches/tags

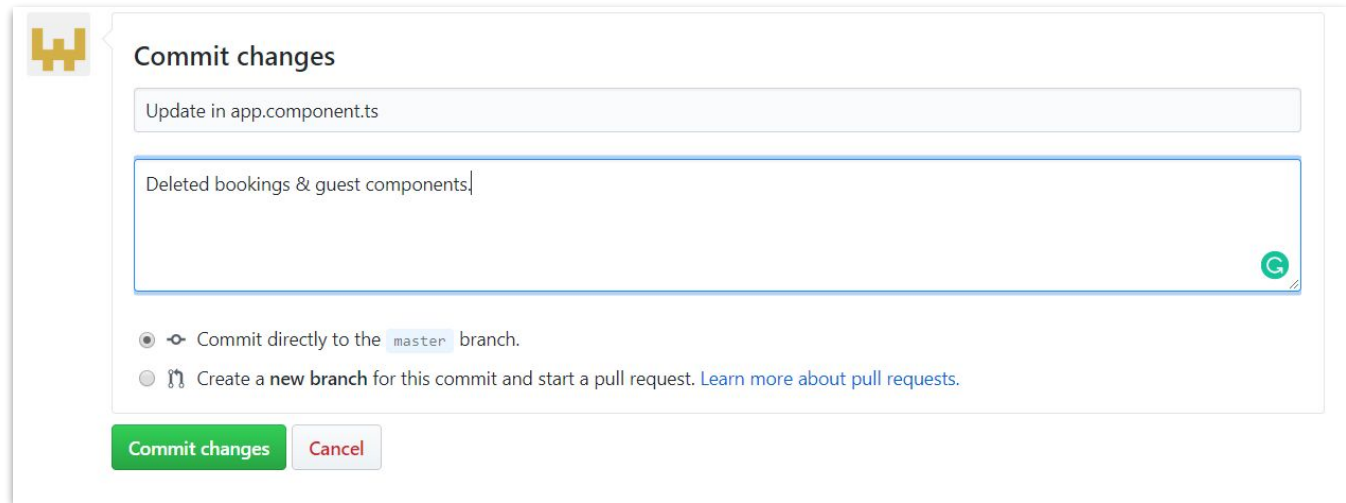

transportbranch

Branches Tags

Create branch: transportbranch
from 'master'

2) Creating a branch for updates & experiments

Integration with GitHub

The screenshot shows a 'Commit changes' dialog box. At the top left is a yellow icon resembling a stylized 'W'. The title 'Commit changes' is in bold. Below it is a text input field containing 'Update in app.component.ts'. Underneath is a larger text area with the message 'Deleted bookings & guest components|'. To the right of the text area is a green circular icon with a white 'G'. At the bottom, there are two radio buttons: the first is selected and labeled 'Commit directly to the master branch.', and the second is labeled 'Create a new branch for this commit and start a pull request. Learn more about pull requests.' At the very bottom are two buttons: a green 'Commit changes' button and a grey 'Cancel' button.

Commit changes

Update in app.component.ts

Deleted bookings & guest components|

☒ Commit directly to the `master` branch.

☐ Create a new branch for this commit and start a pull request. [Learn more about pull requests.](#)

Commit changes Cancel

3) Make changes to a file & push them to GitHub as commits

Integration with GitHub

This branch has no conflicts with the base branch

Merging can be performed automatically.

Merge pull request

You can also [open this in GitHub Desktop](#) or view [command line instructions](#).

Pull request successfully merged and closed

You're all set—the `readme-edits` branch can be safely deleted.

Delete branch

4) Open & merge request
